

# Boost the Performance of Your Starter Fertilizer!

## NutrAsyst Improves Fertilizer Efficiency & Helps Maximize Early-Season Growth

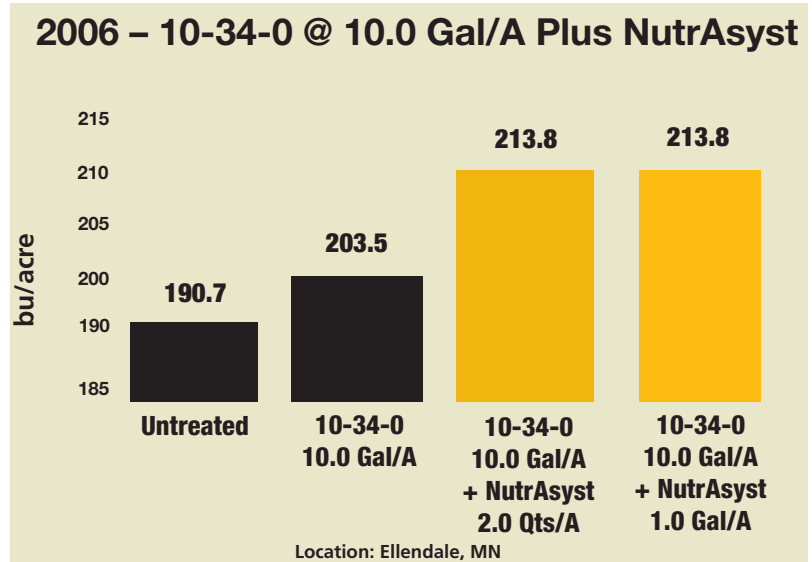

Applying NutrAsyst with your starter fertilizer can improve your bottom line at harvest. Recent research with the high-quality organic acid in starter fertilizer resulted in a profitable yield increase.

NutrAsyst improves fertilizer availability and can result in faster early seedling growth.

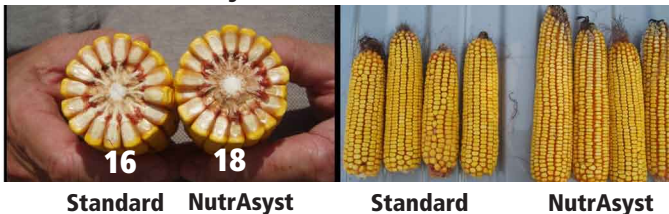

NutrAsyst can increase P efficiency when used in a corn starter fertilizer program—in-furrow or 2X2 placement. The high-quality formulation of NutrAsyst has been proven seed safe. When placed with ortho-phosphate or poly-phosphate starters, NutrAsyst has demonstrated excellent compatibility for weeks.

If your goal is higher, more profitable yields while maximizing your starter fertilizer program, then NutrAsyst can help you reach your goal.

- Improved fertilizer efficiency
- Increased early season root development
- For use with in-furrow and 2 x 2 liquid starter fertilizers
- Compatible with Poly-Phosphates and Ortho-Phosphates
- Excellent storability in liquid fertilizer
- Helps offset early-season moisture or heat stress
- Use rate: 2 – 4 qts/acre
